ABSTRACT

The information in this report pertains to the distribution of enrollments in Oregon's postsecondary institutions of education as of fall 1973. It is the purpose of this report to provide a reliable data base for use by those involved in comprehensive statewide educational planning. This is one of several annual reports published by the Educational Coordinating Council that provides information toward the development of such a data base. Enrollment information has been gathered from the Oregon State Department of Higher Education institutions, the Oregon independent and private colleges and universities, the Oregon public community colleges, and the Oregon proprietary schools. The data for this report was compiled from the registrars' records as soon as enrollment stabilized during the fall term of 1973. The text of this report presents a brief summary section that gives an overview of enrollment data in Oregon's institutions of postsecondary education with comparisons among enrollments in the various educational segments. This discussion is organized around the tables presented in the text of this report and around information contained in the tables of Appendix A. Following the above discussion, a brief summary of fall 1973 enrollment data for each of the four educational segments is presented. (Author/PG)

POSTSECONDARY ENROLLMENT DISTRIBUTIONS IN OREGON FALL - 1973

Prepared By:

NANCY BARNES
RESEARCH ASSISTANT

February 1974

LIST OF TABLES

I Postsecondary Growth Rates Fall 1968-69 Through Fall 1972-73. 6

II Total Headcount and Full-Time Equivalent Enrollment for Oregon's Institutions of Higher Education by Educational Segment and by Program Level - Fall 1973. 8

III Distribution of FTE Enrollment in Community College Vocational Programs by Program Area and Program Level - Fall 1973. 11

IV Distribution of Headcount Enrollment in Oregon's Colleges and Universities by Major Field of Study and by Program Level. 12

A.1 Total Headcount Enrollment in Oregon State Department of Higher Education Institutions by Level of Program and by Institution - Fall 1973. 20

A.2 Total Full-Time Equivalent Enrollment in Oregon State Department of Higher Education Institutions by Level of Program and by Institution - Fall 1973. 21

A.3 Total Headcount Enrollment in Oregon State Department of Higher Education Institutions by Residence and by Institution - Fall 1973. 22

A.4 Total Headcount Enrollment in Oregon State Department of Higher Education Institutions by Major Field of Study and by Institution - Fall 1973. 23

A.5 Total Headcount and FTE Enrollment in Oregon State Department of Higher Education Institutions Fall 1973 as Compared with Fall 1972. 24

A.6 Total Headcount Enrollment in Oregon Independent and Private Colleges and Universities by Level of Program and by Institution - Fall 1973. 25

A.7 Total Full-Time Equivalent Enrollment in Oregon Independent and and Private Colleges and Universities by Level of Program and by Institution - Fall 1973. 26

A.8 Total Headcount Enrollment in Oregon Independent and Private Colleges and Universities by Residence and by Institution - Fall 1973. 27

A.9 Total Headcount Enrollment in Oregon Independent and Private Colleges by Major Field of Study and by Institution - Fall 1973. 28

A.10 Total Headcount and FTE Enrollment in Oregon State Independent and Private Colleges and Universities Fall 1973 as Compared with Fall 1972. 29

A.11 Total Headcount Enrollment in Oregon Public Community Colleges by Level of Program and by Institution - Fall 1973. 30

A.12 Total Full-Time Equivalent Enrollment in Oregon Public Community Colleges by Level of Program and by Institution - Fall 1973. 31

A.13 Total Headcount Enrollment in Oregon Public Community Colleges by Residence and by Institution - Fall 1973. 32

A.14 Total FTE Enrollment in Oregon Community College Vocational Programs by Program Area and by Institution - Fall 1973. 33

A.15 Total Headcount and FTE Enrollment in Oregon Public Community Colleges Fall 1973 as Compared with Fall 1972. 34

A.16 Oregon Proprietary School Enrollments by Program Area and by Institution - Fall 1973. 35

POSTSECONDARY ENROLLMENT DISTRIBUTIONS IN OREGON FALL - 1973

INTRODUCTION

The information in this report pertains to the distribution of enrollments in Oregon's postsecondary institutions of education as of Fall 1973. It is the purpose of this report to provide a reliable data base for use by those involved in comprehensive statewide educational planning. This is one of several annual reports published by the Educational Coordinating Council which provides information towards the development of such a data base.

Enrollment information has been gathered from the Oregon State Department of Higher Education institutions, the Oregon independent and private colleges and universities, the Oregon public community colleges, and the Oregon proprietary schools. The data for this report was compiled from the Registrar's records as soon as enrollment stabilized during the Fall term of 1973. The information was secured by mailing a survey form to each institution. The responses were then verified by building internal checks within the survey instrument and by checking totals against data obtained from the Higher Education General Information Survey (HEGIS) and against information compiled

by other agencies.

The text of this report presents a brief summary section which gives an overview of enrollment data in Oregon's institutions of postsecondary education with comparisons among enrollments in the various educational segments. This discussion is organized around the tables presented in the text of this report and around information contained in the tables of Appendix A. The proprietary school section is not included in this part of the discussion due to the less than 100 percent response rate from these institutions and the resulting incomplete total enrollment figure.

Following the above discussion, a brief summary of Fall 1973 enrollment data for each of the four educational segments is presented. The type of information examined in this discussion is broken down by institution so that institutional comparisons within each educational segment can be made.

The discussions for the Department of Higher Education institutions, the independent and private colleges and universities, and the community colleges are organized around Tables A.1 through A.15 in Appendix A. These tables present information on: headcount enrollment by program level; full-time equivalent enrollment by program level; headcount enrollment by residence status; headcount enrollment by major field of study; and a comparison of headcount and full-time equivalent enrollment with 1972 levels for each of the three educational segments mentioned above.

Much less information is available on the proprietary schools than on the other three educational segments. However, enrollment data by major field of study is displayed in tabular form in Table A.16 in Appendix A, and a discussion of enrollment trends for this educational segment is presented.

Before going on to the discussion section of this report, some explanation of those terms which are specific to educational statistics is needed. Full-time equivalent enrollment (FTE) is an especially important concept. Because all students do not carry a full load of classes, full-time equivalent statistics are used to present a more complete representation of the total student load in institutions.

Full-time equivalent enrollment is calculated by dividing a standard number of credit hours considered to be a normal academic load for a full-time student into the total number of credit hours generated by an institution. For students in the Department of Higher Education institutions and the independent and private colleges and universities, 15 credit hours is considered to be a normal load. In the community colleges, 15 credit hours is considered to be a normal load for students enrolled in lower division transfer programs. Twenty credit hours is used as the standard for a normal load for students in vocational programs.

Finally, something should be said about the system used to classify major fields of study for the purpose of reporting enrollments. Academic

programs were classified according to the Higher Education General Information Survey (HEGIS) taxonomy into twenty-four major fields of study including a general academic category for those students with an undeclared major. State Department of Higher Education institutions and private colleges and universities reported their enrollments in terms of these HEGIS categories.

Vocational programs were categorized according to the U. S. Office of Education classification system into seven program areas. Community colleges reported their enrollments broken down into these seven major categories. The proprietary schools reported enrollments broken down by their own program classifications. These programs were then classified into one of five U. S. Office of Education vocational program categories. A special category--Other Areas of Study--was added to accommodate those programs which did not fit into one of the five vocational categories.

The Educational Coordinating Council is grateful to the institutions for providing the information contained in this publication.

This project was supported in part by funds received from the Division of Academic Facilities of the U. S. Office of Education.

SUMMARY OF STUDENT ENROLLMENT DATA
FALL 1973

As shown in Table I, Fall 1973 postsecondary enrollments in Oregon experienced an increase in both headcount enrollment and full-time equivalent enrollment from Fall term 1972 levels. The increase in headcount enrollment of 7.6 percent in Fall of 1973 represents a reversal in the leveling off trend in enrollments experienced from the Fall of 1971 to the Fall of 1972. The increase of 3.6 percent in full-time equivalent enrollment for Fall of 1973 also represents a reversal of the decline indicated from Fall 1971 to Fall of 1972. A significant factor relating to the increased growth rates in headcount and full-time equivalent enrollments from Fall 1972 to Fall 1973 is the relatively large gains experienced by the community colleges in both of these enrollments. On the other hand, State Department of Higher Education institutions experienced slight declines in both headcount and full-time equivalent enrollments, while the independent and private educational segment showed only a small increase in headcount enrollment and actually experienced a small decline in full-time equivalent enrollment from Fall 1972 levels.

TABLE I

POST SECONDARY GROWTH RATES
FALL 1968-69 THROUGH FALL 1972-73*

	Percentage Increase (+) or Decrease (-)				
	Fall 1968-69	Fall 1969-70	Fall 1970-71	Fall 1971-72	Fall 1972-73
Headcount Enrollment	+10.2%	+11.0%	+10.6%	+ 2.6%	+ 7.6%
Full-Time Equivalent Enrollment	+ 8.8%	+ 9.7%	+ 4.4%	- .4%	+ 3.6%

*Growth rates are calculated from figures listed in previous Student Enrollment Data reports.

Table II presents both total headcount and full-time equivalent enrollment data for the three educational segments and for all the segments combined. Total headcount enrollment for all three educational segments combined was 148,732 in the Fall of 1973. The largest number of students were enrolled in the community colleges which accounted for 51.9 percent of the postsecondary headcount enrollment. State Department of Higher Education institutions enrolled 38.4 percent of the total number of students while the independent and private colleges and universities enrolled 9.7 percent of the total students.

State Department of Higher Education institutions ranked first in terms of full-time equivalent enrollment with 50.6 percent of the total number of full-time equivalent students. Community colleges followed State Department institutions with 35.8 percent of the the total, while the independent and private colleges and universities accounted for 13.6 percent of the total full-time equivalent enrollment.

As mentioned previously, the community college segment was the only educational segment which experienced relatively large increases in enrollments over 1972 levels. In headcount enrollment, this educational segment experienced an increase of 15.2 percent and, in terms of full-time equivalent enrollment, an increase of 14.0 percent was experienced (Table A.15). In contrast to these gains in enrollments, the State Department of Higher Education institutions showed a decline of .1 percent in headcount enrollment and a 1.7 percent decrease in full-time equivalent enrollment (Table A.5). The independent and private colleges and universities did have a small increase in headcount enrollment (2.3%) over 1972 levels, but experienced a decline in full-time equivalent enrollment of .1 percent (Table A.10).

The three educational segments exhibited noticeable differences with respect to the residency status of their students. In the independent and private colleges and universities, the majority of students (54.0%) were residents of a state other than Oregon (Table A.8). While a significant number of students (17.5%) enrolled in State Department of Higher Education institutions were residents of another

GRAND TOTAL	77,237	36,048.6	46.7	14,436	13,679.4	94.8	57,059	51,005.7	89.4	148,732	100,733.7	67.7

state, less than 1 percent of those students enrolled in community colleges came from outside the State (Tables A.3 and A.13). In both the State Department of Higher Education institutions and the independent and private colleges and universities, the largest number of non-resident students were from the state of California. Among the community colleges, the state contributing the greatest number of non-resident students appears to be Washington.

A comparison can be made between the independent and private colleges and universities with respect to the distribution of headcount enrollments by major field of study. In the State Department of Higher Education institutions, Education is the discipline with the greatest number of students enrolled, accounting for 14.1 percent of the total number of students in this educational segment. The General Academic category and Business and Management follow with 10.1 percent and 9.8 percent of the total State Department enrollments respectively (Table A.4). In the independent and private colleges and universities the greatest concentration of students (21.8%) were enrolled in the General Academic category. Theology and Education, with 15.7 percent and 9.3 percent of the total number of students enrolled respectively, follow the General Academic category as major fields of study enrolling the largest number of students (Table A.9).

The community colleges reported enrollments by vocational program area in terms of number of full-time equivalent students, rather than headcount enrollment. The largest concentration of full-time equivalent students was in the Trade and Industrial occupations, accounting

for 42.8 percent of all community college students enrolled in vocational programs. The trade and Industrial occupations are followed by Health Occupations (15.0%), Office Occupations (14.7%) and Technical Education (12.8%) as areas of study receiving the largest full-time equivalent enrollments (Table A.14).

Tables III and IV present a summary of the distribution of students by major field of study and by program level for community colleges and for the colleges and universities respectively. Table III shows that of the 17,393.0 full-time equivalent students enrolled in vocational programs in Oregon's community colleges 85.0 percent are in the vocational preparatory programs as opposed to the 15.8 percent in vocational supplementary programs. Table IV shows that in the State Department of Higher Education and independent and private institutions, students enrolled in lower division courses account for 43.4 percent of the total headcount enrollment in these two educational segments.

The following paragraphs present a brief discussion of student enrollment data for the Fall of 1973 for each educational segment in more detail and will include a discussion on enrollment data for Oregon's proprietary schools in addition to the three educational segments previously discussed. The type of information to be examined in this discussion will be broken down by institution so that institutional comparisons can be made. This discussion will be based on the enrollment data presented in Tables A.1 through A.16 in the appendix of this report.

TABLE III

DISTRIBUTION OF FTE ENROLLMENT IN COMMUNITY COLLEGE VOCATIONAL PROGRAMS
BY PROGRAM AREA AND PROGRAM LEVEL - FALL 1973

	Vocational Preparatory	% Vocational Preparatory	Vocational Supplementary	% Vocational Supplementary	Total
Agriculture	676.1	89.2	82.0	10.8	758.1

State Department of Higher Education Institutions

In the Fall of 1973, the Oregon State Department of Higher Education enrolled 57,059 students (Table A.1). Of the nine institutions in this educational segment, the University of Oregon had the largest headcount enrollment with 16,043 students, followed by Oregon State University (15,488) and Portland State University (13,163). These three institutions account for 78.3 percent of the total Fall 1973 headcount enrollment in State Department of Higher Education institutions.

Table A.2 shows that, in terms of full-time equivalent students, Oregon State University's enrollment was the largest with a total of 15,514.5. Oregon State was followed by the University of Oregon (14,926.1) and Portland State University (9,130.1) in full-time equivalent enrollment. The total full-time equivalent enrollment for these three institutions comprises 77.6 percent of the total full-time equivalent enrollment of 51,005.7 in State Department of Higher Education institutions.

Table A.3 shows that 82.5 percent of those enrolled at the State Department institutions are Oregon residents, while 17.5 percent of those enrolled are from outside of the state. The University of Oregon has the largest percentage of students (33.5%) from outside the state while Oregon College of Education has the smallest percentage (4.0%) of out-of-state students. Of those non-resident students attending State Department institutions, the largest number is from California.

Among the State Department of Higher Education institutions, Education proved to be the field of study with the greatest number of

students enrolled, accounting for 14.1 percent of the total number of students (Table A.4). Education is followed by General Academic (10.1%) and Business and Management (9.8%) as fields of study enrolling the greatest number of students in the Fall of 1973. Concentrations of student enrollments in a particular major field were exhibited by several institutions where that major field of study is the specialty of the institutions. For example, at Oregon Institute of Technology 53.6 percent of the total student body was enrolled in Engineering. The University of Oregon Dental and Medical Schools also enrolled all or a majority of their students in their specialty fields.

As a whole, the State Department of Higher Education institutions experienced a .1 percent decrease in total headcount enrollment and a 1.7 percent decrease in full-time equivalent enrollment over Fall 1972 levels. The largest percentage decrease in headcount enrollment occurred at Oregon College of Education with a decline of 8.5 percent and, in terms of full-time equivalent enrollment, the University of Oregon Dental School shows the greatest decline with a 23.8 percent decrease from Fall 1972. Out of the nine institutions in the State Department schools, headcount enrollments climbed in only four institutions--Oregon State University, the University of Oregon, Oregon Institute of Technology, and the University of Oregon Medical School.

Independent and Private Colleges and Universities

Twenty-one independent and private colleges and universities reported a total enrollment of 14,436 (Table A.6) for Fall term 1973.

The largest institution in this segment, both in terms of headcount and full-time equivalent enrollment, was Lewis and Clark College. Lewis and Clark reported 2,908 students enrolled, followed by the University of Portland (2,024) and Willamette University (1,617). In terms of full-time equivalent enrollments, Lewis and Clark lead with 2,866.3 while Willamette University and the University of Portland totaled 1,691.9 and 1,676.9 respectively (Table A.7).

The private colleges and Universities enrolled a greater percentage of out-of-state students (54.0%) than Oregon students (Table A.8). In this respect, they differed from both the State colleges and universities and the community colleges. The private institution with the greatest percentage of out-of-state students was Reed College with 82.3 percent of its total student body from outside Oregon. The largest number of non-resident students attending private colleges and universities in Oregon was from the state of California.

Table A.9 shows that among the independent and private colleges and universities, the General Academic category had the largest student enrollment, accounting for 21.8 percent of the total number of students. This particular category includes those students who have not officially declared a major field of study. Theology and Education with 15.7 percent and 9.3 percent of the total number of students enrolled respectively, follow the General Academic category as major fields of study enrolling the largest number of students. Nine institutions reported all of their enrollments in one major field of study, four out of nine listing Theology

as the only area in which students were enrolled.

Table A.10 shows that as a whole the private colleges and universities experienced an increase of 2.3 percent in total headcount enrollment over Fall 1972. In terms of full-time equivalent enrollment the private and independent educational segment shows a .1 percent decrease from Fall 1972. Seventeen out of the twenty-one private institutions reported increased headcount enrollments while four reported enrollment decreases. Western Conservative Baptist Seminary realized the greatest percentage increase in students among the private colleges and universities, with a 26.5 percent increase in headcount enrollment. Mt. Angel College experienced the largest percentage decrease in headcount enrollment (75.6%).

Community Colleges

There are 13 community colleges in the state of Oregon with a total enrollment of 77,237 (Table A.11). The largest community college in the State, Portland Community College, enrolled 25,269 students or 32.7 percent of the total number of students enrolled in this educational segment. Portland Community College is followed by Lane Community College (11,195) and Mt. Hood Community College (9,650) in terms of headcount enrollment.

Community colleges enroll many more part-time students than do the private colleges and universities. For this reason, their full-time equivalent enrollment is much lower in relation to their headcount enrollment than in the two educational segments previously discussed. As shown in Table A.12, Portland Community College leads the community colleges in terms of full-time equivalent enrollment with 10,939.1 "FTE'S", followed by Lane Community College (5,540.1)

and Mt. Hood Community College (5,308.8).

By far, the greatest majority of community college students (92.4%) are residents of their particular community college district (Table A.13). Only .8 percent of the total number of students are classified as out-of-state students, while the remaining 6.8 percent of the students reside within Oregon but outside of the district of the community college which they attend. Treasure Valley Community College claims the largest percentage of out-of-state students (14.4%), the majority of which come from the state of Idaho. Rogue Community College has the largest percentage of in-state, but out-of-district students (28.3%).

As shown in Table A.14, the largest vocational program area at the community college level is the Trades and Industrial occupations which accounts for 42.8 percent of the total full-time equivalent enrollment.

Three other program areas with relatively large percentages of full-time equivalent students are: Health Occupations (15.0%); Office Occupations (14.7%); and Technical Education (12.8%).

As a whole, the community colleges' headcount enrollment shows an increase of 15.2 percent over total headcount enrollment reported in Fall 1972 (Table A.15). In terms of full-time equivalent enrollment, the community college segment realized a 14.0 percent increase over Fall 1972. Rogue Community College had the largest percentage increase (66.6%) in headcount enrollment, and also claimed the greatest percentage increase (30.8%) in full-time equivalent enrollment. Only two community colleges, Southwestern Oregon and Mt. Hood,

experienced decreases in total headcount enrollment, and only two institutions had fewer full-time equivalent students than last year.

Proprietary Schools

The reported enrollment in proprietary schools during Fall term 1973 was 11,667 (Table A.14). This represents a 1.0% decrease from the reported enrollment in the Fall of 1972. Out of the 124 institutions to which enrollment surveys were sent, 99 institutions or 79.8% responded in Fall of 1973. Since 92 out of 136 institutions responded last year, the rate of change in enrollment does not appear to be significant.

Proprietary schools reported enrollment by their own particular program names and are presented in tabular form by classifying them into one of five U. S. Office of Education vocational program categories. A special category--Other Areas of Study--was added to accommodate those programs which did not fit into one of the five vocational categories.

The program area with the largest concentration of proprietary school students was the Trade and Industrial Occupations, accounting for 65.1 percent of total Fall term enrollment. It should be noted, however, that many of the schools enrolling large numbers of students in this program area include correspondence programs in their enrollment reports. The Trade and Industrial Occupations are followed by Office Occupations and Health Occupations with 12.8 and 9.4 percent of the total number of students respectively as program areas with the greatest number of students.
